

Faculty Review of Open eTextbooks

The [California Open Educational Resources Council](http://www.cool4ed.org) has designed and implemented a faculty review process of the free and open etextbooks showcased within the California Open Online Library for Education (www.cool4ed.org). Faculty from the California Community Colleges, the California State University, and the University of California were invited to review the selected free and open etextbooks using a rubric. Faculty received a stipend for their efforts and funding was provided by the State of California, the William and Flora Hewlett Foundation, and the Bill and Melinda Gates Foundation.

Overall Comments

If you were to recommend this textbook to colleagues, what merits of the textbook would you highlight?

- This is simply an electronic version of Teller's Logic Primer, which was a very nice logic textbook which went out of print and which the author (Teller) put online after the copyright was returned to him.
- It's got a lot of problems and worked out solutions.
- The one downside is that it's not organized very well electronically: it's just a scanned copy of the book, so you can't search or navigate very easily on a browser, and you can't annotate or anything.
- Further, you can't download the entire book, and so you just will end up having 50 different pdfs floating around on your computer.

What areas of this textbook require improvement in order for it to be used in your courses?

- I'd use it right now-- it's just fine as textbook.
